Goal

The goal of this project is to challenge large language models (LLMs) in detecting idioms in running text.

Each original sentence contains a potential idiomatic expression (**PIE**) (e.g., break the ice), annotated to indicate whether it is idiomatic or literal.

We provide a variant sentence by adding new context designed to confuse the model: (1) If the expression is idiomatic, the added context should mention the literal meaning; (2) If the expression is literal, the added context should suggest the idiomatic meaning.

Your task is to ensure that the resulting variant remains valid in terms of making sense and that the original PIE's idiomacy remains. We don't want to create ambiguity for humans!

General

Annotations will be carried out in Label Studio, log in here.

Annotation Workload: We need only one annotation per sample. Annotate only samples not already handled by another annotator.

Something is off?

Reach out to me (Kai).

kai.golanhashiloni@post.runi.ac.il

Phase I - sample validation

You are given an original sentence from the ID10M dataset along with the PIEs and the true idioms that exist there. Your task is to either:

1. If correct, leave it as is and submit.
2. If there is any mistake, fix it and write the corrected version.
3. If completely wrong or problematic, write INVALID.

Valid Sample definition

A sample must follow those guidelines.

1. Naturalness: The sentence must read fluently and make sense as a whole, including grammar, punctuation, etc.
2. PIEs:
 - a. The sentence must not introduce a new PIE, besides the given PIE.
 - b. The sentence must not repeat the existing PIE.
3. Clarity of Idiomaticity:
 - a. If the PIE appears in the “true_idioms” column, it should be used idiomatically. (“let’s play games to break the ice”)
 - b. If it is not there, it should be used in its literal form. (“the ship must be fast to break the ice”)
4. Invalid Cases:
 - a. The idiomaticity of the expression is ambiguous. (“He was stabbed in the back”)
 - b. More than one PIE or repetition of the PIE.

Annotation guidelines

1. If everything is well, leave the text box blank.
2. If there is a problem that you can fix, write the corrected version in the box.
 - a. And add a comment explaining.
3. If the sentence is invalid, write INVALID and submit.

Phase II - variants validation

You are given an original sentence from the ID10M dataset along with the PIEs and the true idioms that exist there. Additionally, you are given a **variant sentence that the LLM has generated**. Your task is to either:

1. If correct, leave it as is and submit.
2. If there is any mistake, fix it and write the corrected version.
3. If completely wrong or problematic, write INVALID.

Valid Variant definition

A variant must follow those guidelines.

1. Naturalness: The variant must read fluently and make sense as a whole, including grammar, punctuation, etc.
2. PIEs:
 - a. The variant must not introduce a new PIE, besides the given PIE.
 - b. The variant must not repeat the existing PIE.
3. Sentence Preservation:
 - a. The original sentence must appear unchanged in the variant.
 - b. Minor punctuation changes (periods, commas) are allowed.
4. Clarity of Idiomaticity:
 - a. The idiomatic status of the original PIE must remain the same.
 - b. If it was idiomatic, it should still be idiomatic.
 - c. If it was literal, it should remain literal.
 - d. The added context should not harm the human ability to interpret and determine if it is idiomatic or literal.
 - e. The added context should be at least a little related to the opposite usage than the one of the PIE in this context. ("It's so cold here on the boat, when will we leave Canada...you know what, let's first play some games to break the ice")
5. Invalid Cases:
 - a. The idiomaticity of the expression is ambiguous given the new context.
 - b. More than one PIE or repetition of the PIE.

Annotation guidelines

1. If everything is well, leave the text box blank.
2. If there is a problem that you can fix, write the corrected version in the box.
 - a. And add a comment explaining.
3. If the sentence is invalid, write INVALID and submit.

Thank you very much!
